Remarks

Mark	Description
**	Limited danger of transmission These organisms are usually not transmitted through the respiratory tract.
AAV	Adeno-associated virus Laboratory strains of some adeno-associated viruses (adeno-associated virus 2,3, 5), which are used as vectors can normally be assigned to group 1.
EPD	Highly contagious Organisms that cause highly contagious, reportable animal epidemics (Ordinance on Epizooties Art. 2, SR 916.401). Activities with such viruses require special approval by the Swiss Federal Veterinary Office
NYR	Not yet registered Viruses whose names are not yet registered by the International Committee on Taxonomy.
PH	Pathogenic for humans
PHV	Pathogenic for humans and for vertebrates
PM	Pathogenic for mammals Pathogenic for mammals only. So far, no human diseases caused by these viruses have been reported.
POL	Polio virus At present, for the use of polio viruses safety level 2/polio (BSL-2/polio) is required. This includes a number of measures additional to the usual package for safety level 2 (see WHO global action plan for the laboratory containment of wild polioviruses, Department of Vaccines and Biologicals, WHO, Geneva, 1999). As soon as the eradication of the polio viruses moves further forward, there will be stricter safety requirements (see above reference for details).
TEN	Tentative members of the family/ subfamily/ genus
TSE	Transmissible spongiforme encephalopathic agents Biological agents associated with transferable spongiform encephalopathies are classified as 3**. Work with these agents must be done according to safety level 3, though certain level 3 measures can be omitted (see Classification of work using prion genes and prion proteins, www.efbs.ch).
UAS	Unassigned members of the family/ subfamily/ genus
VAR	Variola viruses Samples of Variola viruses are only held at the "State Research Center of Virology and Biotechnology, Koltsovo, Novosibirsk region, Russian Federation" and at the "Center for Disease Control and Prevention, Atlanta USA". Activities with these agents are only allowed in the laboratories of these institutes and under maximum safety measures, and they require approval by the World Health Organization (WHO).
VEC	Vector See Statement of the Federal Expert Committee for Biosafety on the classification of work with genetically modified viral vectors, www.efbs.ch .
